

Attendees

- Pieter Pauwels [Ghent University]
- Ana Roxin
- Kris McGlinn [ADATP-TCD]
- Walter Terkaj [ITIA-CNR]

Date and time

- 13/04/2017
- 17:00 CET

Agenda

1. short introductions and state of affairs (5min. - Kris)
2. short update of each sub-group (5 minutes each, sub-group leader)
3. overview of main outcomes from BuildingSMART conference (Pieter Pauwels, 15 mins)
4. any other items for discussion (open for suggestions)

Minutes

Overview of main outcomes from BuildingSMART conference (Pieter Pauwels, 15 mins)

The building smart linked data strategy is not to push, but to allow people to arrive and ask questions. Many people made interesting presentations around linked data.

Becoming more of a community.

Pushing ifcOWL as a standard

Comes close to express, which is good to have as a base point for W3C community group

Once established as standard, we can now improve upon this

ifcDOC tool supports exporting ifcOWL schema as data (supports OWL, XSD, EXPRESS)

Connects to the bsDD, so can make some sameAs relations between languages. Not available yet as RDF or LD.

ifcRail, Tunnel, Road (ifc Infrastructure ecosystem)

Initiatives in France, Netherlands,

Ana: Asked for more use case scenarios

Pieter: No use case behind OWL, just a language.

Makes data available in another technology :)

Ana: More and more people getting used to the terminology around Semantic Web and Linked Data

Pieter: Difficulty with building SMART, must wait on agreement between all the members before going forward

Here is the W3C working group, we can go ahead and explore ideas

We should look at modularising data here in W3C with BOT.
